SUMMARY

Full-stack software engineer with production experience spanning React, Vue.js, Angular, and React Native on the frontend, and Go, Java, and Node.js/Express on the backend, built inside a highly regulated financial services environment. Independently architected and shipped a fraud-detection platform from the ground up and owns a production API serving personalized financial data to millions of users with guaranteed response consistency. Integrates AI-assisted development tools into a daily workflow, paired with disciplined human review. Brings a non-traditional path into engineering — public communications and digital-content experience at the Federal Reserve Board and the Brookings Institution — that translates into sharp cross-functional collaboration and clear technical communication.

SKILLS

Front-End: JavaScript, TypeScript, React, Vue.js, Angular, React Native, HTML5, CSS3

Back-End: Go, Java (production); Node.js, Express (hands-on); GraphQL (working knowledge); RESTful API design

Cloud & DevOps: AWS (API Gateway, Lambda, ECS), CloudFormation, Docker, CI/CD, Git

Data: Relational databases (PostgreSQL and similar); working familiarity with NoSQL

AI-Assisted Development: Daily use of AI coding tools (GitHub Copilot, Cursor, Claude), paired with rigorous code review and automated testing

Collaboration: Cross-functional partnership across product, design, and engineering; clear technical communication for technical and non-technical audiences

EXPERIENCE

Software Engineer — Capital One, McLean, VA *(Feb 2023 – Present)*

- Architected and shipped customer-facing financial web applications in React and TypeScript, serving millions of users in a highly regulated, performance-critical banking environment.
- Designed and owned a Go-based backend API end to end, delivering personalized financial data by sourcing and ranking information across multiple upstream systems; engineered deterministic logic that guarantees consistent results across repeated requests.
- Independently built a check fraud protection system from the ground up — UI, backend APIs, and database — architecting the full solution with minimal existing context and delivering it against a hard deadline.
- Extended frontend delivery beyond React by building and maintaining additional customer-facing products in Vue.js and Angular, achieving production-level fluency across three major frameworks.
- Integrated AI coding tools into daily development workflow, pairing rapid iteration with disciplined human review — code review, automated testing, and peer review — to maintain quality and catch security risks before merge.
- Partnered cross-functionally with product managers, designers, and backend engineers to translate ambiguous business requirements into robust, scalable system designs.

Public Communications Strategist — Federal Reserve Board, Washington, DC *(Feb 2019 – Jan 2023)*

- Managed the secure handling and precisely timed publication of highly sensitive FOMC interest rate decisions and other market-moving communications, delivering zero-error, deadline-driven releases across policy, legal, communications, and engineering teams.
- Administered the division's content management system, establishing governance standards for permissions, content lifecycle, and publishing guidelines to keep public-facing materials accurate and current.

Senior Web Content & Digital Media Specialist — Brookings Institution, Washington, DC *(Dec 2016 – Feb 2019)*

- Managed web content for the Brookings Economic Studies program, publishing to the Economic Studies section of brookings.edu, which drew more than 7 million views from 5 million visitors in a single year.
- Built an interactive data visualization using React and D3.js, translating complex research data into clear, engaging narratives for public audiences.
- Grew the program's reach by running the Brookings Econ Twitter feed and managing five newsletters, including spearheading the creation of two new newsletters.

EDUCATION

Bachelor of Arts — Louisiana State University, 2014

General Assembly — Software Engineering Immersive, 2021
